

SAJITH J

AI Engineer

Coimbatore, India | +91 8637440071 | jsajith76@gmail.com | github.com/s4jith | linkedin.com/in/s4jith

Summary

Pre-final year AI & DS student specialising in **LLM orchestration, RAG systems, and agentic AI pipelines** — with deployed products and real internship impact. Experienced in building evaluation-driven GenAI applications using LangChain, LangGraph, and LLM Models. Top 8% in Amazon ML Challenge across 4,000+ teams.

Skills

Languages: Python, SQL

AI & ML: Machine Learning, Deep Learning, Reinforcement Learning, PyTorch, HuggingFace

Generative AI: RAG, LangChain, LangGraph, LangSmith, LlamaIndex, Prompt Engineering, RAGAS, DeepEval

Databases & Vector Stores: Pinecone, FAISS, MongoDB, MySQL, Redis

Frameworks: FastAPI, Flask

Cloud, Infra & DevOps: AWS (EC2, S3), Docker, Git, Vercel, Render, Ollama

Experience

TeamMistake Technologies | AI Engineer Intern

Aug 2025 – Mar 2026

- Built **AI agents using LangGraph** that manage multi-step conversations — the system understands context, decides what to ask next, and routes responses dynamically based on user input.
- Developed **RAG pipelines using LangChain and Pinecone** that answer questions from large document sets; added smart caching so the system avoids repeated AI calls, cutting API usage by **70%+**; measured output quality using **RAGAS & DeepEval**.
- Integrated **voice interaction** using Whisper for speech-to-text and XTTS for text-to-speech; connected **Gemini** to automatically score user responses and generate personalised feedback reports.

Edunet Foundation x Microsoft | AI Intern

Jun 2025 – Jul 2025

- Built a RAG-based document QA system over 500+ documents; trained ML classifiers for spam detection and fake-user identification achieving **~93% classification accuracy** via NLP preprocessing and supervised learning.

Projects

Trajectory Prediction System for Autonomous Driving | intentdrive.sajith.app

Tech Stack: Python, PyTorch, Transformers, Multi-Sensor Fusion (Camera, LiDAR, Radar), BEV Transformation

- Engineered a **multi-agent forecasting model** using Transformer with social attention — predicts 6-second trajectories from 2-second motion history across multiple agents under occlusion and dynamic interactions.
- Constructed a **multi-sensor fusion pipeline** (camera + LiDAR + radar, BEV transformation) achieving **minADE@3: 0.42m, minFDE@3: 0.78m, 7.1% miss rate at ~18 FPS**.

NCERT AI Learning Platform | micro-learning.app

Tech Stack: Python, LangChain, LlamaIndex, Pinecone, Gemini API, RAGAS, FastAPI, MongoDB

- Built a **context-aware AI tutoring system** using LangChain + LlamaIndex that only answers from syllabus content — preventing out-of-scope responses and keeping explanations grounded to the student's class level.
- Designed a **Gemini-powered assessment engine** that generates MCQ, fill-in-the-blank, and subjective questions from retrieved content; tracks topic-wise accuracy to identify weak areas and personalise learning paths.

Achievements and Leadership

- Top 8%** — Amazon ML Challenge (4,000+ teams): multimodal pricing model achieving **~92% text, ~88% image accuracy, 91.2% MAPE**.
- MobilityX 2.0 (2025):** Runner-up & Software Track Winner, 250+ teams — ML-based EV battery digital twin for health prediction and lifecycle decisions.
- SRCAS 2.0 (2025):** Winner, 300+ teams — NLP-based mobile app for real-time cyberbullying detection and prevention.
- Secretary [2025–2026]** — Dept. of AI & DS, SIET
- Professional & International Service Director [2025–2026]** — Rotaract Club of SIET

Education

Sri Shakthi Institute of Engineering and Technology

2023 – 2027

B.Tech in AI & DS — CGPA: 8.48

Vivek Vidyalaya Matriculation Higher Secondary School

2023

HSC — 86%
